SHEBANG

create a python program say helloworldsc.py and print hello world.

helloworldsc.py should be run as a script.

file should have read,write and execute(rwx) permission for owner r,w too group members and no permissions to the others.

#to check python3 intrepreter path :

```
whereis python3
```

To run a python program as a script add first line in python file:

```
#!/usr/bin/python3
print("Hello World")
```

run following command:

```
chmod 764 helloworldsc.py
./helloworldsc.py
```
