dpkg command

The dpkg tool is basically a package manager for Debian/Debian-based systems.

How to install a package using dpkg?

```
sudo dpkg -i [package-name]   #.deb
```

for example:

anydesk_5.5.4-1_amd64.deb (anydesk tool)

```
sudo dpkg -i anydesk_5.5.4-1_amd64.deb
```

How to remove an already installed package using dpkg?

```
dpkg -r [package-name]
sudo dpkg -r anydesk
```

How to list all installed packages in the system?

```
dpkg -l
```

How to make dpkg list contents of a package?

```
dpkg --contents [package name]
```

How to check if a package is installed or not?

```
dpkg -s [package-name]
```

How to print architecture of packages dpkg installs?

```
dpkg --print-architecture
```

How to purge a package using dpkg?

```
dpkg -P [package-name]
```
